Professional Cloud DevOps Engineers implement processes throughout the systems development lifecycle using Google-recommended methodologies and tools. They build and deploy software and infrastructure delivery pipelines, optimize and maintain production systems and services, and balance service reliability with delivery speed.

The Professional Cloud DevOps Engineer exam assesses your ability to:

• Bootstrap a Google Cloud organization for DevOps
• Apply site reliability engineering practices to a service
• Optimize service performance
• Build and implement CI/CD pipelines for a service
• Implement service monitoring strategies
